August 10, 2020

OSI reference model

- It was introduced by International Organization for Standardization (ISO) in 1984.
- Its goal is the interoperability of diverse communication systems with standard communication protocols.
- The concept of a seven-layer model was provided by the work of **Charles Bachman** at **Honeywell Information Systems**.
- In this model, a networking system was divided into layers.

Application Layer

Application Layer:

HTTP,HTTPS, FTP, NFS,
DHCP, SMTP, TELNET,POP3

Network Applications

File Transfer

Web Surfing

Email

Virtual Server

FTP

HTTP/S

SMTP

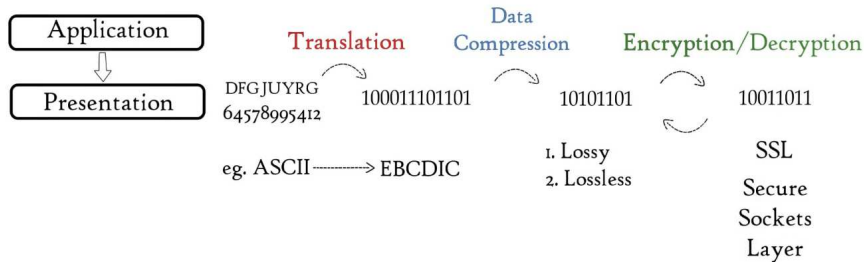

Telnet

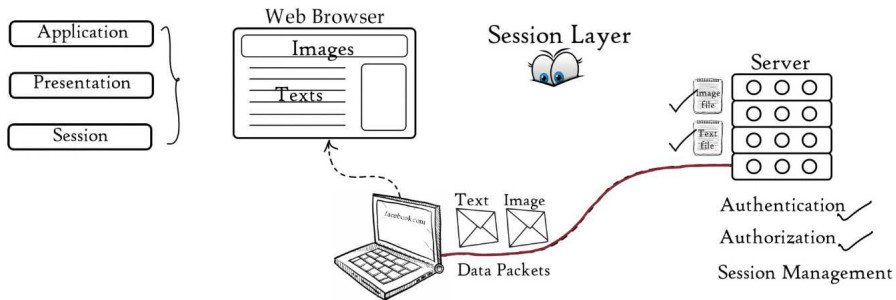

Presentation Layer

Presentation Layer

Session Layer

Transport Layer

Transport Layer

Segmentation
Flow Control
Error Control
Connection and
Connectionless Tx

Flow Control:

100 Mbps

XXXX Mbps

10 Mbps

10 Mbps

Segments

Segmentation:

Data

Segments

Error Control:

Automatic Repeat Request

Checksum

Corrupted

Transport Layer Cont...

UDP

No feedback

Example:

VIDEO
GAMES

TFTP DNS

TCP

Feedback

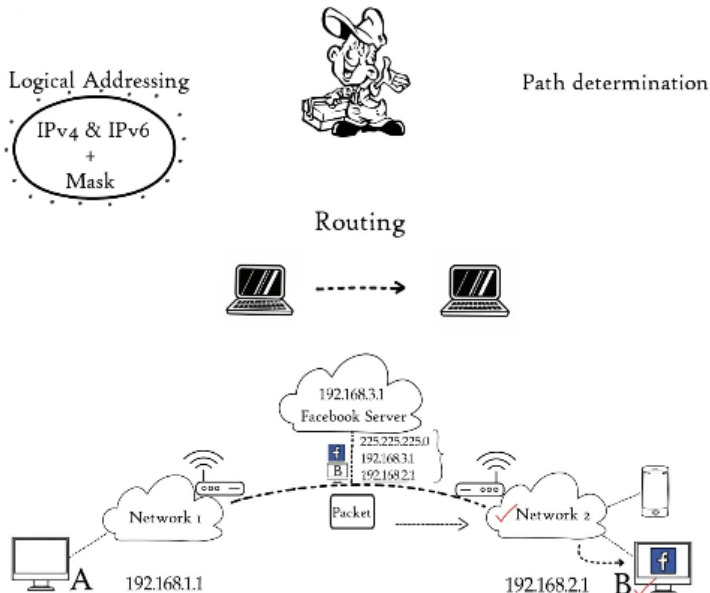

FTP

Network Layer

Network Layer Cont...

Network Layer Cont...

Path determination

Data Link Layer

Data Link Layer

- Logical addressing : Network layer
- Physical addressing : Data Link layer

Data Link Layer Cont...

Data Link Layer Cont...

Controls how data is placed
and received from the media

(Media Access Control)
(Error Detection)

DATA LINK LAYER

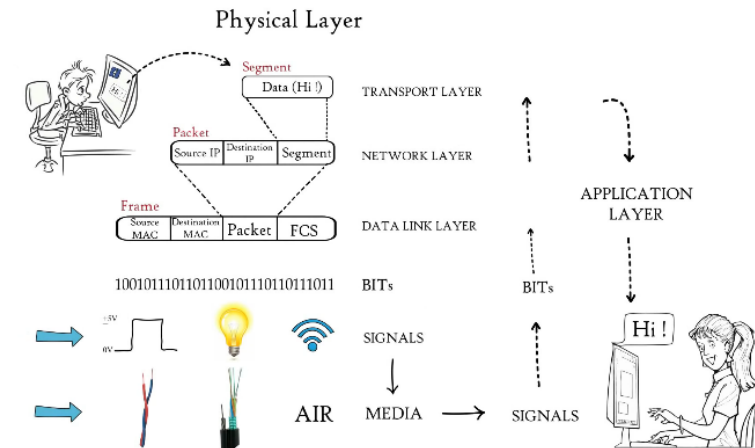

CSMA

(LAN Cable, Optical Fiber, Air)

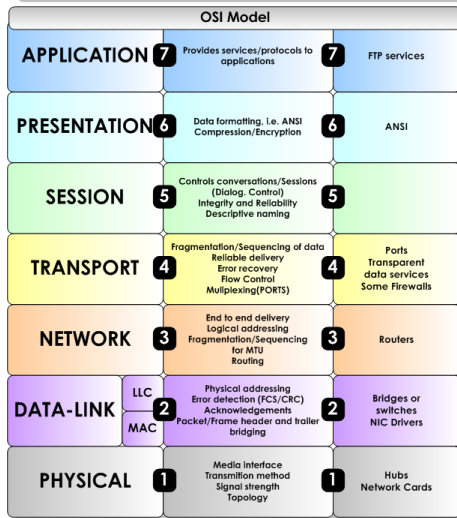

Physical Layer

OSI Reference Model

The OSI Model (Open Systems Interconnection)
